

### **Transparent Bag compound/ blends from Advance Bio Material**

Transparent bag compound/ blends mainly used for making side seal bags for garment packaging. Major problem/complaints encountered by bag manufacturer are

Inconsistency in processing resulting into gauge variation, transparency variation and difficulty in bag making

Post bag making problem encountered are Yellowish ness after some period of time , Seal opening after some period of time, Lower shelf life and migration of white powder from bag to garment.

Above problems are resulting into low level of quality and return/ rejection from customers /users.

We have studied each problem carefully and solved each problem by designing formula for it and employing special process -after extensive experiments.

Our transparent compounds/blends are available in 2 versions

1. Ready to use compound (Melt compound)
2. Ready to use blends (blended using special equipment ensuring consistency in quality)

These blends and compounds does not contain any kind of filler/ talc/ transparent filler etc. or any such .Such cheaper material deteriorate quality and creates above mentioned problems.

Our blend contains special quality Raw material and additives sourced from Europe or USA from most reputed companies of the world. Some of the additives increase shelf life, increase sealing and increase strength of the compounds/blends.

Blends and compounds available in 25 kg standard packing from Mumbai and Chennai in ready stock.
